THANK YOU!

Got your attention? Great! There's more →

Congrats on your purchase with Echo Technologies™! We are delighted to play a role in your health journey. Here are a few things you should know about your new Echo H2® Server.

The Echo H2® Server does not have an internal filtration system, therefore prior filtration is required before use. The Echo H2® Server can be connected to a Reverse Osmosis system or a whole home filtration system.

- To install your Echo H2® Server, do the following:
 - Start by removing the two white plugs on the top of the machine. Use the white plastic tool in the accessory box for extra leverage.
 - Connect white pressure reducer into the IN port.
 - Connect main waterline to IN port (source).
 - Connect mineral energizer into the OUT port (optional).
 - Connect faucet waterline to the OUT port.
 - Plug the Echo H2® Server into power outlet.
- The Echo H2® Server comes with a small external mineral energizer. The mineral energizer is an optional accessory that adds healthy minerals to the water.
- There are two white ports on the side of the Echo H2® Server, these are for decoration, you will not need to install anything here.

Please refer to the Echo H2® Server Instruction Manual included, for more information on installation.

If you have any questions regarding your Echo H2® Server, please don't hesitate to contact our Customer Support Team at support@echoh2o.com or by phone at (855)737-1114.
